We have always been keen on efficient and minimalistic bikes. Something that would look right for many years upfront. But it also would have to be as functional as it can get. We never really liked the modern electric bikes with the gigantic oversized downtubes, huge mid-drive motors, moped type shapes and electric wires sticking out everywhere. Yes we love motorcycles. But our ideal e-bicycle must look primarily as a bicycle.

Introducing the Tritao X20 city E-BIKE:

- Fully titanium e-bike frame with Reynolds UK 3D printed dropouts and double butted tubing
- MAHLE X20 discreet hub motor drive
- Built-in, ultra compact downtube battery
- Optional removable bottle cage battery for extra range
- Built-in top tube control button with battery level indication and assist level control
- Optional handlebar assist level control buttons
- ANT+ compatibility
- Fully integrated Deda Elementi DCR cable routing

- Integrated dynamo hub lighting system by Supernova Germany
- Sram X01 AXS 12 speed transmission with 520% of gear ratio
- Carbon rims and fork, because screw those dull city bikes
- 55Nm lightweight motor with a 250Wh battery built in the down tube
- Up to 100km range with built in battery and up to 200km range with an added Range Booster battery
- Designed, manufactured and assembled in the heart of the EU bicycle industry — Aveiro, Portugal
